SUN TANNING

Cosmedico®
FIRST CHOICE IN TANNING

I wanna be your **DELUXE** **SUN!**

DID YOU KNOW?

Did you know that at the heart of each sunbed is the lamp? Only the lamp gives your skin a tan. If the lamps are inferior, then your tan will be!

This means that you would spend money unnecessarily - because the reason why you visit the salon is to get a beautiful tan, right?

WHAT IS IMPORTANT TO YOU AND HOW DO YOU GET THE PERFECT TAN?

STEP 1

The lamps in the sunbed need to be good quality, a good make and within their useful life (hours used). This will lead to a good tan. Bad quality lamps of a bad make and outside their useful life mean a bad tan. Ask the staff at the tanning salon how long the lamps in your cabin have been in operation and what is their useful life according to the manufacturer's recommendation in hours.

Tip: After a certain time, lamps are worn-out and tan worse. Lamps need to be replaced regularly!

STEP 2

Determine your skin type along with the tanning salon and ask the staff for the recommended session times that you can use to get a nice tan. It is important that the tanning salon advise you on safe tanning in line with the regulations.

Tip: Make sure to tan more than once and within the recommendations that the tanning salon suggest. Otherwise your tan will fade too fast and you would have saved money in the wrong place!

STEP 3

You will get a perfect tan with the Cosmedico 10K100® lamp. Ask for the sunbed equipped with the 10K100® in your tanning salon. In this sunbed you will experience that the lamp really makes a difference.

Tip: The Cosmedico 10K100® is absolutely unique. It is simultaneously pigment forming and pigment darkening and has at least 10% more tanning effect!

Hello sunbathing recently was absolutely **DELUXE!**
